

WHY AI IS DANGEROUS?

In this fascinating world there are so many things going on like good and evil things behind though we don't care about them so we are going to pick one of a topic which is ai.

AI means artificial intelligence which is also known as machine intelligence .It is course in which a machine is given human intelligence .

Is AI is threat to human race and whole another kinds?

what will be its effects?

Are there any precautions which can stop this?

Lets start from human IQ ,an average human IQ is given by 85 to 115 with this percentage of IQ can we able to beat the machine intelligence in future because as we updating technology by same means we are updating AI .comming to present situation AI not much modified so that it can replace humans but we cant deny that it can replace humans and man kind in future.

If AI is been modified there is direct threat to man kind for examaple in present, AI is replacing jobs of humans in many categories like restaurants , automobile industry . Also there are famous personality who gave warning about AI like billgates, elonmusk and others . There are some advantages of AI too but they can become threat for future. if AI surpasses human inelligence then it can become difficult or impossible for humans to control.

If u take google,facebook and other social media they are using this AI. If u search some thing in google or any other social media platforms then which ever notifications or posts will get they will be related to your search results . so this means whole social media is connected to AI which can be threat . you might ask how? in this they are triggering emotions . if your character is lonely then ai detects that you are lonely person and it only shows posts related to it hence your emotion is triggered .As social media is huge market they earn through your data .so you will be addicted to social media so that they can earn money . unless you think this is due to AI.

There are some methods to prevent .In which to stop the modification of of AI or human should acquire the ability to surpass AI there are so many companies working on this for example neurolink.In

neurolink they will inject a chip into your brains through skull its size is equal to penny.but coming to my perspective this can become harmful too. As you know everyone cannot be able to adore this chip so that there will be a wall between chiped humans and normal humans .same as AI but there will be no end of humanity.
